

FILTER ELEMENT – CKL

Series: AAF Series
(Bulk Liquid Removal)

DESCRIPTION

CKL condensate separators have been developed for high efficient removal of bulk liquids from compressed air⁽¹⁾ and vacuum systems.

⁽¹⁾For any other technical gas please contact us or your local dealer

For a proper operation of the condensate separator insert the flow direction needs to be from outside to inside. Compressed air entering the separator housing is redirected by the water separator insert to a cyclone flow. "Heavy" liquid contaminants within the compressed air are pushed against the inner wall of the housing this way (centrifugal forces), finally draining into the bottom of the housing by gravity while the compressed air, freed from a major part of liquid contaminants, is flowing towards to outlet in the middle of the housing.

FILTER ELEMENT RATING ACCORDING TO ISO 8573-1

Solid particles class	Water class	Oil class
/	8	/

Typical result, on the assumption of suitable inlet concentrations as well as operating and marginal conditions.

TECHNICAL SPECIFICATION

Operating temperature	1,5 - 65 °C / 35 - 149 °F
Operating pressure	0 - 16 barg / 0 - 232 psi
Efficiency ⁽²⁾	>98%
Flow Direction	OUTSIDE to INSIDE

⁽²⁾ Under nominal flow, 20°C, inlet droplet size 10µm - 30µm

MATERIALS

Outer cylinder	Stainless steel 1.4301
Support (inner)	Stainless steel 1.4301
Bonding	Polyurethane
Endcaps	PA6
Sealing	NBR

SIZES

Model	Diameter [mm]	Height [mm]	Flow Capacity [Nm ³ /h]	Flow Capacity [scfm]	Fits into filter housing

CORRECTION FACTORS

To calculate the correct capacity of a given filter based on actual operating conditions, multiply the nominal flow capacity by the appropriate correction factor(s). CORRECTED CAPACITY = NOMINAL FLOW CAPACITY x C_{OP} x C_{OT}

OPERATING PRESSURE

[bar]	2	3	4	5	6	7	8	9	10	11	12	13	14	15	16
